We are pleased to announce that Shoreline Business Solutions has available, a secure PIN Selection and Verification process. The Magtek IntelliPIN® unit is an attractive, compact and easy-to-use PIN pad that allows for fast, secure and convenient PIN selection/verification.

Its compact footprint allows the device to fit comfortably on almost any desktop or teller-window area. Its portability feature allows your cardholder to remove the PIN pad from its base, hold the device in their hand, and to select their PIN in a more physically secure and comfortable manner. When finished with PIN selection, the PIN pad can be returned to its base, where it will transfer the PIN block and card data to the host application. A reliable and convenient 3 track MSR adds additional functionality to the device, so that it can read Credit, ATM or Driver License cards to speed up ID verification activities at the teller window and/or to provide secure access to financial accounts.

- Secure and tamperproof, the IntelliPIN unit protects PIN encryption keys per ANSI 9.8.
- Graphic make swiping easy for the cardholder.
- Device is small and stylized: it conserves premium counter space.
- Supports both DUKPT and Master Session key management schemes.

The IntelliPIN® unit will have software programmed with the financial institutions BIN and card data. The unit will then ship directly to the Institution within 14 business days after receipt of order request.
